

Environmental and Quality policy, Nolek AB

- Quality for us is to satisfy our customers' requirements and needs, which is usually partly expressed in terms of product specifications.
- The quality shall be such as to constitute an essential buying cause for customers.
- Our commitments and services are carried out in a professional and competent manner. This shall be accomplished with reliable and effective objectives and procedures ensured through continuous updates and improvements.
- We are constantly working towards current goals to continually improve ourselves and our business.
- The aim is to ensure that, when delivered, the customer is satisfied that the order is in accordance with the contract or product specification.
- Our solutions will help to reduce the environmental impact of our customers and increase the customers product quality through the detection of unwanted leaks in the production process.
- We work with margin to existing legislation and to demands from stakeholders, regionally and internationally.
- We conserve raw materials and energy by using them effectively and reducing the spread of pollutants.
- A committed management should motivate and include all employees in the development and application of environmental and quality work.
- We put the environment in focus and help companies to leak control their products, so that emissions of e.g. Oil and gases do not take place in the environment
- We apply environmentally adapted product development where we, for example, in a product category developed a helium recovery system, to save costs for our customers, but also to not burden the environment.
- Environment is a priority area for us, and we work continuously to find out the most favorable technology and materials regarding the entire lifecycle of the equipment and to our significant environmental aspects.

Magnus Westher, Managing Director
